

FREELANCING PLATFORM

PROJECT DOCUMENTATION

INTRODUCTION

Project Title: SB Works – Freelancing Platform

Team Members: Individual Project (Single Person)

The Freelancing Platform is a web-based application designed to connect clients and freelancers on a single platform. It allows users to showcase skills, hire freelancers, and manage projects efficiently through a secure and user-friendly interface.

PROJECT OVERVIEW

SB Works is a modern freelancing web application that helps individuals and businesses find trusted freelancers for digital services such as web development, design, and software solutions. The platform provides authentication, profile management, and project interaction features, ensuring a smooth freelancing experience.

OBJECTIVES

- To connect freelancers and clients digitally
- To provide a secure login and registration system
- To showcase freelance services professionally
- To simplify hiring and project collaboration

KEY FEATURES

- Freelancer and client authentication (Login & Register)
- Professional landing page showcasing services
- Secure user login system
- Responsive and modern UI
- Easy navigation between pages
- Secure data handling

SYSTEM ARCHITECTURE

Frontend (React JS)

The frontend is developed using React JS to build an interactive and visually appealing user interface. It includes pages such as Home, Login, and Registration. React Router is used for navigation and React Hooks manage state efficiently.

Backend (Node.js + Express.js)

The backend is built using Node.js and Express.js. It handles user authentication, data validation, and business logic through RESTful APIs.

Database (MongoDB)

MongoDB is used to store user credentials, freelancer profiles, and client data. Mongoose is used to define schemas and manage database operations.

TECHNOLOGIES USED

- Frontend: React JS, HTML, CSS, JavaScript
 - Backend: Node.js, Express.js
 - Database: MongoDB
 - Tools: VS Code, Git, Postman
-

SETUP INSTRUCTIONS

Prerequisites

- Node.js
- MongoDB (Local or Atlas)
- Git

Installation Steps

1. Clone the project repository
 2. Install backend dependencies using `npm install`
 3. Install frontend dependencies using `npm install`
 4. Configure environment variables in `.env` file
 5. Start frontend and backend servers
-

```

API DOCUMENTATION

User APIs

- POST /api/auth/register – Register new user
- POST /api/auth/login – User login

Freelancer APIs

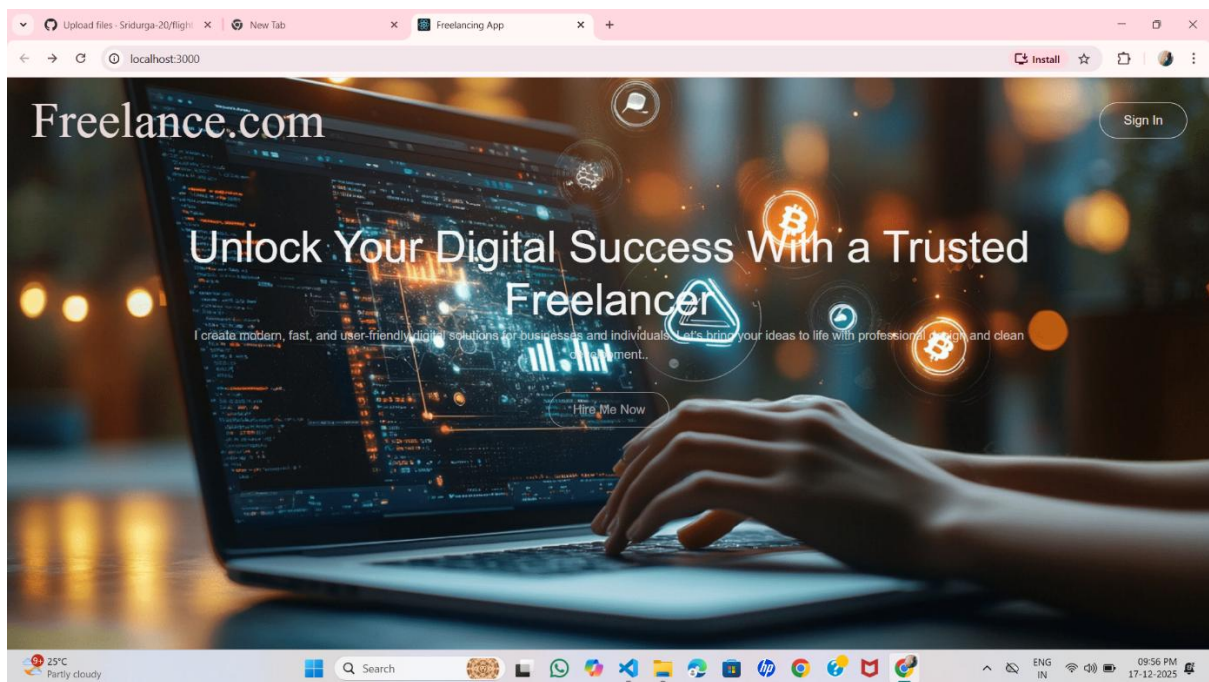

- GET /api/users – Get freelancer profiles
- POST /api/profile – Create or update profile

USER INTERFACE

Home Page

The home page displays a professional landing section with information about freelancing services. It encourages users to sign in and hire freelancers through a visually attractive interface.

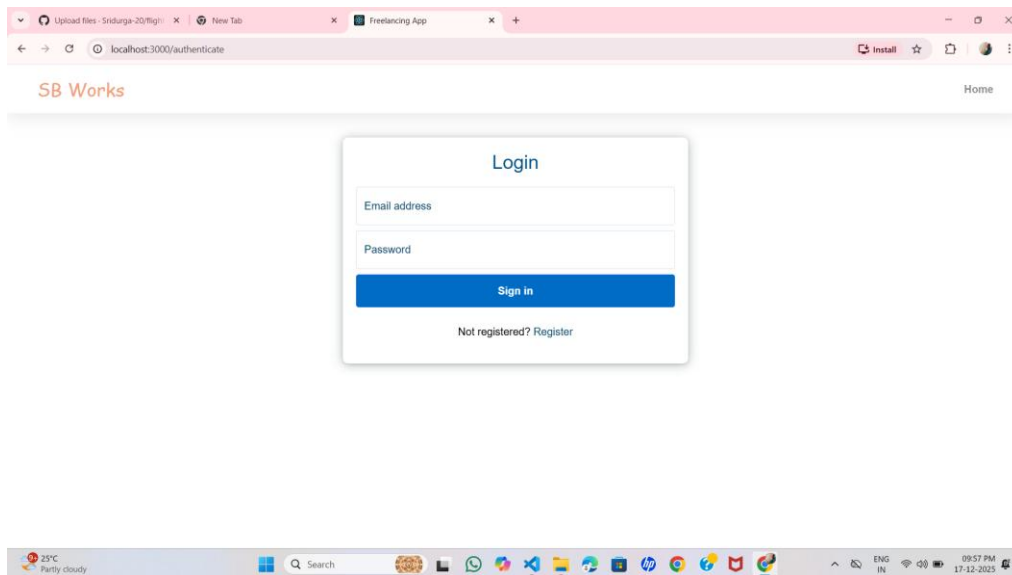

Freelancing Home Page Screenshot

Login Page

The login page allows registered users to securely log in using email and password. New users can register through the registration option.

Login Page Screenshot

TESTING

- Manual UI testing was performed for all pages
- Authentication APIs were tested using Postman
- Navigation and validation were verified

KNOWN ISSUES

- Limited features for project management
- No real-time chat system
- Payment system not integrated

FUTURE ENHANCEMENTS

- Freelancer profile ratings and reviews
- Real-time messaging system
- Payment gateway integration

- Project posting and bidding system
 - Admin dashboard for monitoring users
-

CONCLUSION

The SB Works Freelancing Platform successfully demonstrates the implementation of a full-stack web application using the MERN stack. The system provides a secure and professional platform for freelancers and clients and can be enhanced further with advanced freelancing features.
